## --: Education :--

### Scaler School of Technology

Undergraduate Program in CS & AI

Bengaluru, India

Aug. 2025 - June 2029 (Expected)

- CGR : 9.01/10
- Enrolled in a 4-year residential software engineering program focused on Data Structures, System Design, Backend Development, and scalable systems.
- Hands-on training through industry projects, hackathons, and real-world engineering problems.
- Curriculum emphasizes practical software development and startup-oriented engineering skills.

### Indian Institute of Technology , MADRAS

Bachelor in Data Science

Sep. 2025 - July 2029 (Expected)

- CGPA : 9.75/10
- Pursuing a parallel online BS degree in Data Science from IIT Madras.
- Coursework includes Machine Learning, Statistics, Python Programming, Database Systems, and Data Analytics
- Focused on applying data-driven methods to real-world problems.

## --: Technical Skills :--

**Languages:** Java, Python, JavaScript, MySQL, HTML/CSS

**Frameworks/Libraries:** React, Pandas, NumPy, FastAPI, Matplotlib

**Developer Tools:** Git, VSCode, Linux

**DSA:** Solved 250+ leetcode problems

**Concepts :** DSA, Machine Learning Basics, Statistics, Probability, Data Analysis

## --: Projects :--

### Google Calendar Clone | React, Node.js, Next.js, TypeScript, Drizzle ORM, PostgreSQL, Docker

- Engineered a full-featured calendar application with real-time event management, recurring events (RRULE), and multi-view support (day, week, month, year).
- Collaborated with a 3-member team in the Scaler AI & RL Hackathon, delivering a production-ready calendar system with Docker containerization.
- Implemented offline-first architecture with progressive web app capabilities, enabling seamless event synchronization without internet connectivity.
- Architected backend API with calendar sharing, attendee management, and activity logging using Next.js App Router and Drizzle ORM.
- Developed advanced UI features including drag-and-drop scheduling, email autocomplete, keyboard shortcuts, and animated transitions using Tailwind CSS.

### Educational Web Platform | HTML, CSS, JavaScript, LocalStorage

- Built a multi-page educational web application with structured learning paths for DSA, Web Development, and Mathematics using pure HTML, CSS, and Vanilla JavaScript.
- Implemented dynamic DOM manipulation to render topic content, generate quiz questions, and update UI elements based on user interactions.
- Developed an interactive quiz system with instant scoring, teacher-style feedback, and subject-wise progress tracking using browser LocalStorage.
- Designed a client-side state management system ensuring quiz results and progress are stored and isolated across subjects.
- Created a clean user flow (Landing → Login → Dashboard → Topics → Quiz) with responsive UI and reusable JavaScript modules.

### YAML Multi-Agent Orchestration Engine | FastAPI, Python, YAML, OpenAI

- Built a YAML-driven multi-agent workflow engine enabling dynamic orchestration of AI agents using declarative configuration.
- Developed FastAPI APIs for workflow validation and execution, supporting sequential and parallel agent pipelines.
- Implemented shared memory and context management allowing agents to exchange intermediate outputs during execution.
- Integrated tool execution and multi-LLM support, enabling agents to perform computations and interact with external AI models.

## --: Additional Information :--

**Soft Skills:** Team Collaboration, Communication, Problem Solving, Adaptability, Analytical Thinking, Time Management, Leadership

**Spoken Languages:** English , Hindi
